MIP INTERNACIONAL

Steel sheet piling

Supply, driving and extraction for earth retention projects in Colombia.

MIP INTERNACIONAL TRADING S.A.S.

Service scope

Profile supply
Requirement review
Driving and extraction
Equipment coordination

Scope and specifications require project review.

Profile families

U

Larssen

Temporary or permanent retention to the project design.

Z

AZ profiles

Options for retaining walls.

HZ

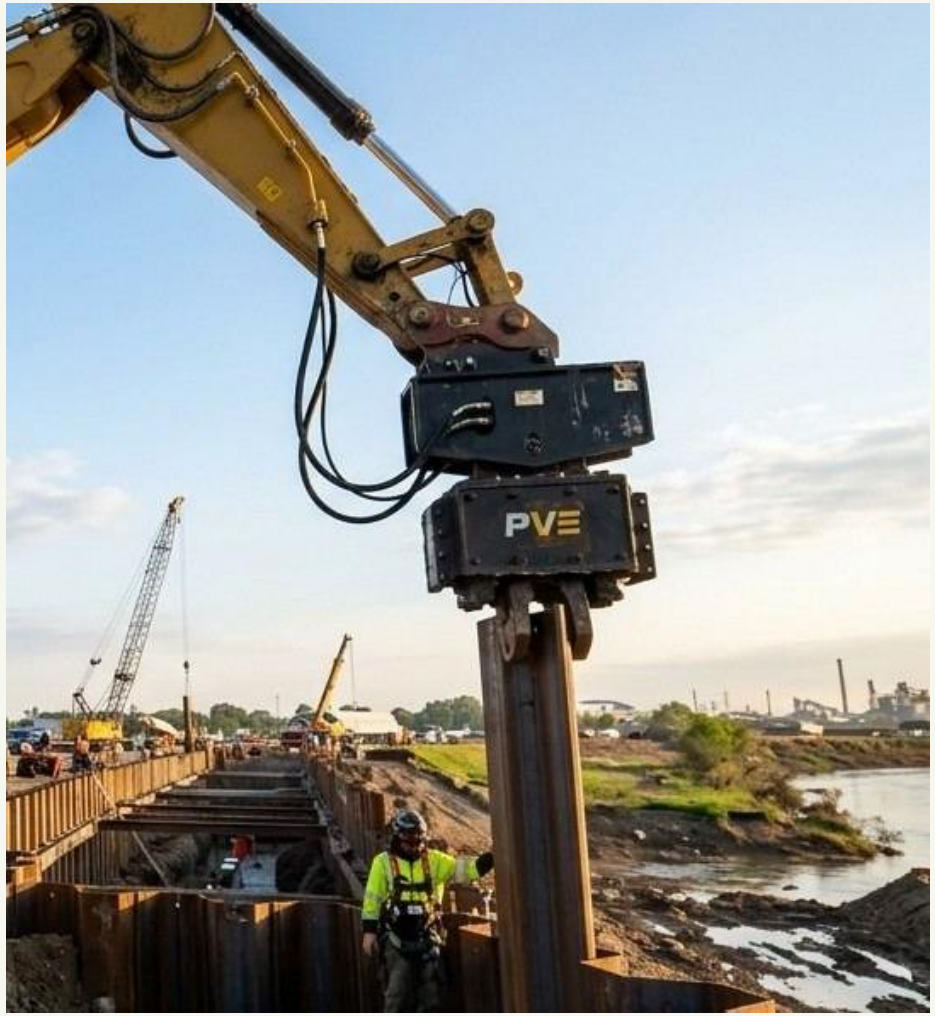
Combined walls

Primary elements with intermediate sheet piles.

Scope and specifications require project review.

System selection

The soil study, groundwater and planned loads guide system selection. The design determines the profile, its length and the supports required.



Scope and specifications require project review.

Installation process

01 Access and ground review
02 Profile guiding and alignment
03 Driving to the agreed procedure
04 Site control and monitoring

Scope and specifications require project review.

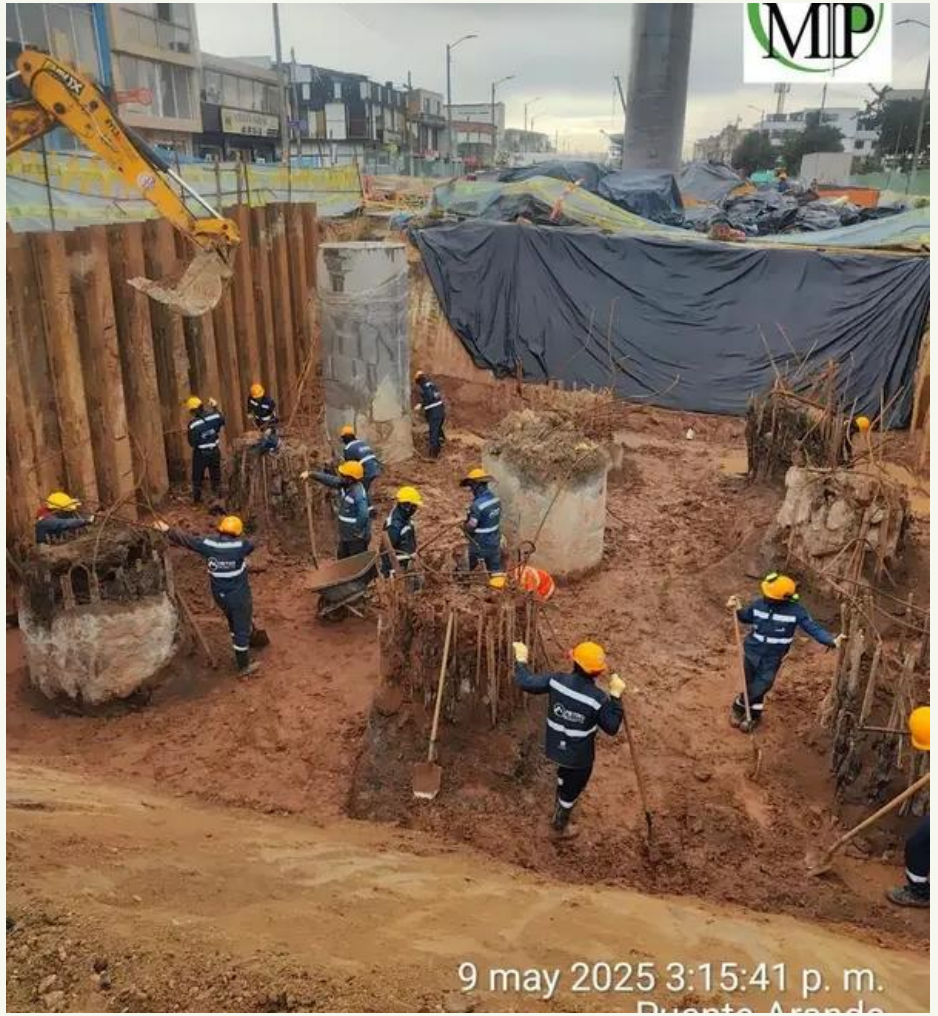
Equipment on site

Equipment configuration and attachments must suit the profile and project conditions. Operations confirms availability and capacities.

Scope and specifications require project review.

Applications

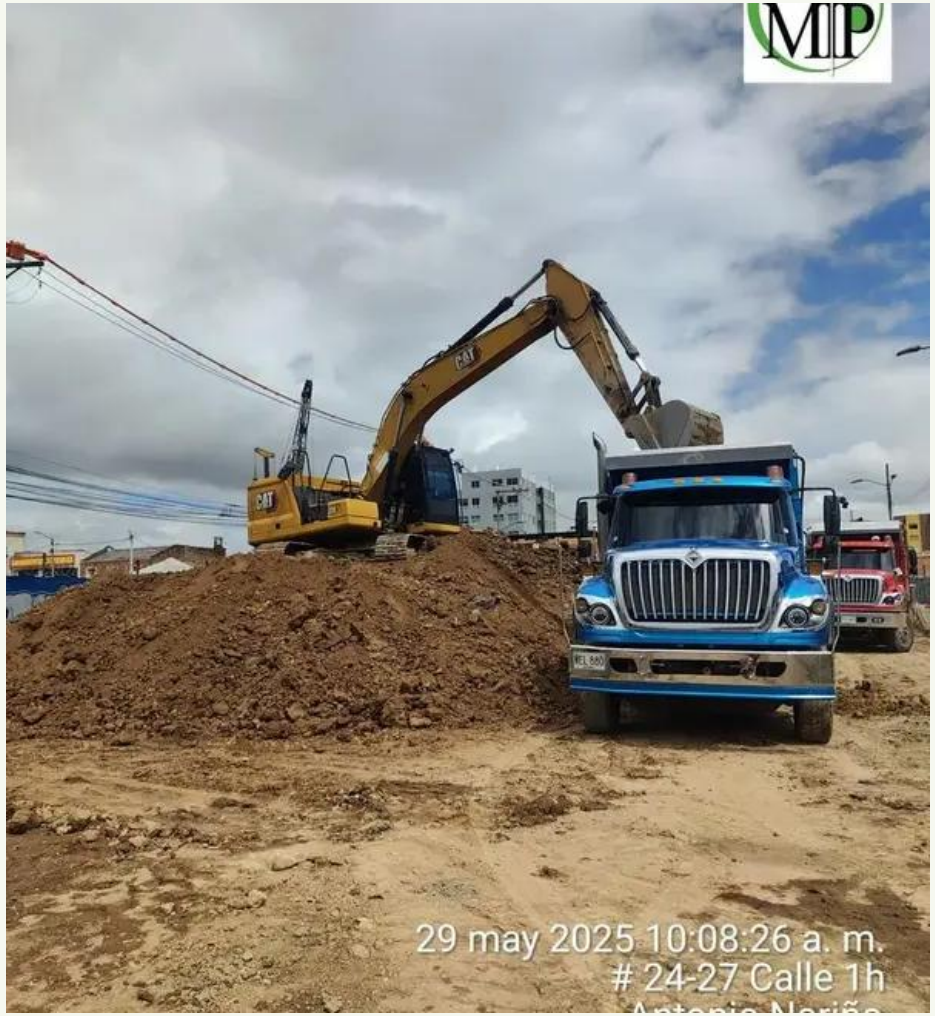
Excavation retention
Hydraulic works
Infrastructure and platform construction



Scope and specifications require project review.

Extraction and recovery

Profile recovery depends on material condition, the extraction method and the design. Reuse requires a review of the material and the new project requirements.



Scope and specifications require project review.

Information for a quote

Location and access
Available soil study
Retention depth and length
Drawings and design conditions
Start date and required scope

Scope and specifications require project review.
